Team of Handova Ui

Handova

About Handova:-

Handova is a mobile application that creates a marketplace
for handmade products It connects local artisans and small sellers
with customers who appreciate creativity and authenticity.
The app makes it simple for sellers to show their work and buyers
can discover unique and high quality products that cannot be found in mass markets.

Main Goal:-

Support local creators promote handmade culture and provide a trusted digital space
for selling and buying handmade products easily and safely.

Problem:-

Handmade sellers often struggle to reach the right audience Many rely on social media
which does not provide tools for secure sales order tracking and organized product
display At the same time customers find it hard to get authentic handmade
products in one place.

Solution:-

Handova solves this by offering a mobile app where

-Sellers can create a shop upload products and manage sales

-Buyers can search filter and purchase products safely with a smooth experience

Both sides benefit from community features like stories and posts to engage and share
updates.

Value:-

-A platform focused only on handmade products

-Better visibility for small sellers

-Safe and simple shopping experience for buyers

Community connection between creators and customer

Ahmed Mohmed Eid:-

Onboarding and Login **(4 screens)**

Splash screen with logo

Login and sign up

Forgot password

Choose role seller or buyer

Goal is to make it easy for the user to enter and set his account type.

Youssef Mohamed El-Nahhas:-

Home and Discovery **(4 screens)**

Home feed with products and categories

Search page

Filter by price or category or location

Product details with photos and price

Goal is to let the customer find products easy and clear.

Youssef Mohammed Salama:-

Cart and Orders **(4 screens)**

Cart with selected products

Checkout with payment and address

Order confirmation page

Order tracking for buyer

Goal is to make the shopping and buying process smooth and safe.

Nagham Salah Arkoup:-

Seller and Community **(4 screens)**

Seller profile with shop and products

Add new product with photo and text

Mariam ElSayed Shokry:-

Profile and Support **(4 screens)**

Buyer profile with wishlist and orders

Notifications about sales or orders

Settings for account and language

Help and about page

Goal is to give tools for support and personal space for user.

Current Work and Market Research

We already started working on the project by doing research on similar applications

and studying market needs We focus on how handmade sellers promote

their products the challenges they face and how customers search for authentic handmade items

This research helps us design the app to match the needs of sellers and buyers and confirms

there is realdemand for such a platform.

Pre Design Work and Team Collaboration

Before starting the design we are working as a team to prepare the foundation of the project This
includes brainstorming features writing user stories and creating a simple workflow We are
also checking competitor apps and collecting feedback from potential users The goal is to
make sure that the design and development are based on real needs not just ideas This
teamwork helps us stay aligned and makes the project stronger.
